Germany - Korea Public Space Forum
 Deutschland - Korea Public Space Forum

This document is the result of a series of meetings and discussions between German and Korean architects and urban planners. It explores the concept of public space and its role in urban development. The text discusses the importance of public space in creating vibrant, livable communities and offers insights into the design and management of public spaces in both Germany and Korea.

Public Space
 Public space is a key element of urban development. It provides a place for people to meet, interact, and enjoy the outdoors. Public spaces can be found in parks, plazas, streets, and public buildings. They are essential for creating a sense of community and improving the quality of life in urban areas.

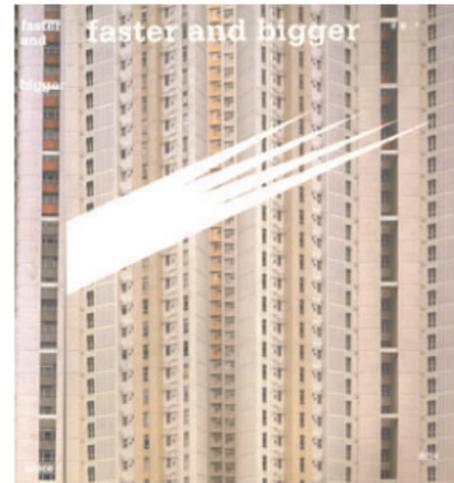

Designing Public Space
 Designing public space is a complex task that requires a deep understanding of the needs and desires of the community. It involves a collaborative process between architects, urban planners, and the public. The goal is to create spaces that are functional, aesthetically pleasing, and accessible to all.

Public Space in Korea
 Public space in Korea has a rich history and a unique character. It is often characterized by its traditional architecture and its close relationship with nature. However, rapid urbanization and modernization have led to a loss of public space in many urban areas. This document offers insights into how public space can be designed and managed in a way that respects and builds upon the traditional Korean context.
